

Anders Dam Jensen – Update on the JU’s new missions

Anders will briefly touch on the JU’s achievements so far and present the JU’s new missions following the adoption of the new regulation in 2021, including the selection of hosting entities to host and operate new supercomputers and the acquisition of the first European exascale supercomputers and quantum computers.

The JU’s upcoming missions also focus on the further strengthening of Europe’s leading position in HPC applications, through supporting innovation via co-design; an ambitious research and innovation programme supporting European technological and digital autonomy and includes a new mandate to develop strategic research and innovation partnerships in HPC with third countries, including facilitating access for researchers to EuroHPC JU resources and co-development of HPC applications.
