

Troels Haugbølle is a computational astrophysicist who is currently specialising in star and planet formation. After graduating at the University of Copenhagen he was a postdoctoral fellow at the University of Aarhus in Denmark and the Autonomous University in Madrid, Spain, before returning to Copenhagen, where he joined the Centre of Star and Planet formation in 2011. He is now associate professor and section leader of astrophysics and planetary science at the Niels Bohr Institute, University of Copenhagen. He has developed several large-scale codes used for understanding kinetic plasmas, the evolution of the interstellar medium, and the formation of stars and planets.
