Distinguished Engineer @ Submer Immersion Cooling

Bio: Daniele started his HPC career administering and optimizing the cluster used to design and streamline the aerodynamic features of F1 cars for the “Scuderia Toro Rosso” team. He later moved on to ClusterVision, one of Europe’s best known HPC System Integrators as a Linux Engineer in charge of deploying bespoke solutions for the company’s customer-base. He soon got promoted to the rank of Engineering Manager, overseeing every project from its inception to its completion and managing the teams tasked with building, deploying and supporting each of these solutions.

Daniele recently joined Submer as Distinguished Engineer, bringing his extensive HPC experience and known-how to this exciting start-up and their innovative cooling solution.
